Organizer - Project Vision and Scope

1. Main idea

To create a mobile application system for internal communication between people in small organizations (e.g. small businesses, start-ups, student groups) which could significantly help to organize and structurize tasks, events, centralizing sources of information and improving work-flow between members of specific community.

2. Goals

- Setting hierarchy by assigning roles and attribution to a group
- Bulletin boards for easy access to important information
- Easily readable calendar containing e.g. goals, events, deadlines
- Communication between people using private and group chats
- Sharing documents, files and information

3. Objectives

- Creating a database
- User login system
- Establishing connection between client-server
- Implement user authorization
- Design UI

4. Non-goals

- Video calls (Why: Organizer's priority is to allow/ease communication combined with task structure inside of small businesses. While AIO apps for task-structure and text-chat can be good for working in one environment, Video calls are far more complex and have been well implemented in other applications such as Microsoft Teams or Zoom).
- Complex user profile system, with many customization options (e.g background photo) (Why: There is no need in an effective communication system to provide such only-cosmetic features).

5. Target audience

Small businesses, start-ups, students groups, that need to simplify the connection and workflow between working groups while working on a project.

6. Members of project:

1. Michał Wirkowski - **leader**
2. Piotr Gruchała
3. Mateusz Klemann
